

Sales Analysis Dashboard Project Report

This project is a fully interactive Sales Analysis Dashboard developed in Microsoft Excel. The dashboard provides business insights related to sales performance, revenue trends, customer behavior, product analysis, and city-wise order tracking. The main objective of this project is to transform raw sales data into meaningful visual reports that help businesses make better decisions using charts, Pivot Tables, slicers, and KPI cards.

Project Objectives

- Analyze total sales revenue and order trends.
- Identify top-performing products and categories.
- Compare revenue generated during different occasions.
- Track monthly and hourly sales performance.
- Provide interactive filtering using slicers and timelines.
- Improve business decision-making through data visualization.

Dashboard Features

Feature	Purpose
Total Orders	Displays the total number of customer orders.
Total Revenue	Shows overall business revenue.
Avg Customer Spending	Calculates average customer spending amount.
Order Delivery KPI	Tracks average delivery timing.
Revenue by Occasion	Analyzes festive and occasion-based sales.
Revenue by Category	Compares performance of product categories.
Revenue by Hour	Displays order trends by time of day.
Revenue by Month	Shows monthly growth and decline trends.

Top Products Analysis	Highlights highest revenue-generating products.
Top Cities by Orders	Identifies cities with highest order counts.
Interactive Slicers	Allows users to filter dashboard dynamically.

Tools & Technologies Used

- Microsoft Excel
- Pivot Tables & Pivot Charts
- Slicers and Timelines
- Conditional Formatting
- Data Cleaning and Formatting
- Excel Functions and Formulas

Project Workflow

1. Collected raw sales dataset.
2. Cleaned and formatted the data in Excel.
3. Created Pivot Tables for analysis.
4. Designed charts and KPI cards.
5. Added slicers and timelines for interactivity.
6. Built the final dashboard layout for visualization.

Business Insights Generated

- Soft Toys generated the highest revenue among categories.
- Certain occasions like Anniversary and Raksha Bandhan showed strong sales performance.
- Revenue trends varied significantly across different months.
- Some cities contributed more orders compared to others.
- Peak order timings helped identify customer purchasing behavior.

Conclusion

The Sales Analysis Dashboard successfully converts raw business data into meaningful insights through interactive charts and reports. This project demonstrates practical Excel dashboarding, data analysis, visualization, and reporting skills that can help businesses monitor performance and make data-driven decisions effectively.
